

Many of our clients don't think they have leaks.

Until they become our clients.

Survey more miles. Find more leaks. Save more money.

Airborne Natural Gas Emission Lidar (ANGEL) Services from ITT is finding significant leaks for our clients every day we fly—often on lines that were thought to be leak-free. In fact, we're finding the leaks that visual patrols and walking crews are missing, so it's no surprise we've saved our clients literally millions of dollars in recaptured revenues and avoided costs. Simply put, ANGEL Services is the most comprehensive leak detection and corridor monitoring service in the world. Isn't it time you became our client to better ensure the integrity of your pipelines, the safety of surrounding communities, and your environmental stewardship?

Call 585-269-5121 or visit www.ssd.itt.com/angel today to get started.
